Experiment 1: two independent temporal ground-truth mechanisms

A Food allergy: early feeding trajectory

Shaded window: Birth to +6 calendar months (inclusive)

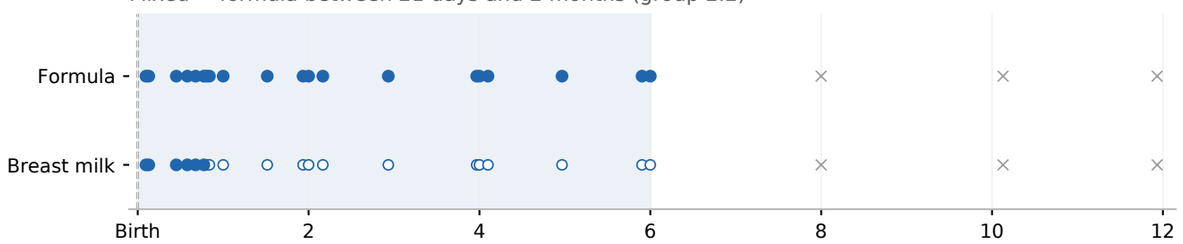

TB_00002 | P(FA=1) = 8.0% | observed FA = 0

Formula only (group 2.0)

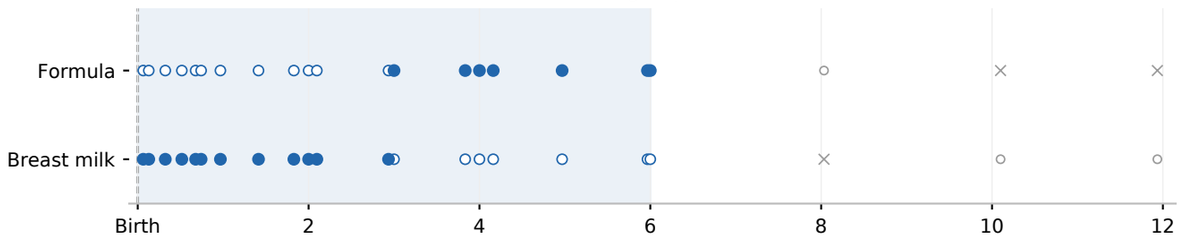

TB_00111 | P(FA=1) = 4.1% | observed FA = 1

Mixed → formula between 21 days and 2 months (group 2.2)

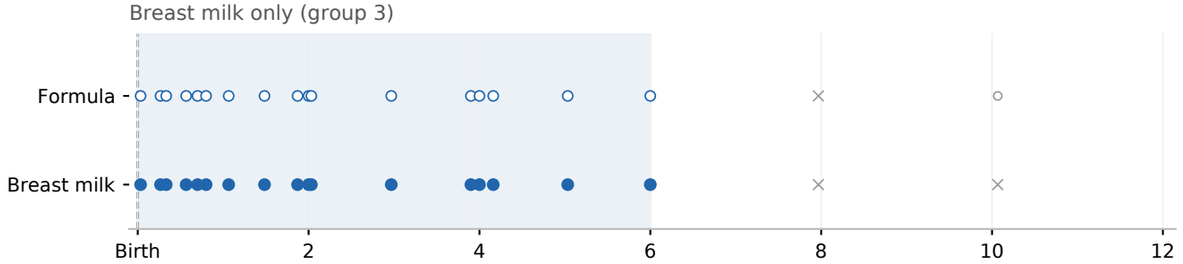

TB_00020 | P(FA=1) = 12.7% | observed FA = 0

Breast milk → formula between 2 and 4 months (group 5.2)

TB_00022 | P(FA=1) = 20.4% | observed FA = 1

Breast milk only (group 3)

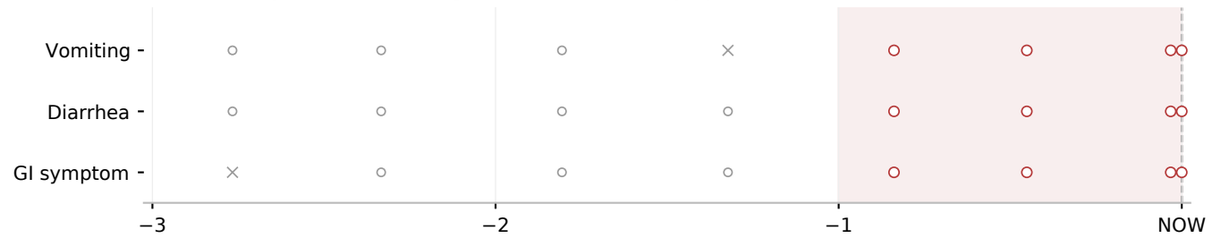

Age in calendar months · first 12 months shown

B GI: recent symptom indicators

Shaded window: NOW −1 calendar month to NOW (inclusive)

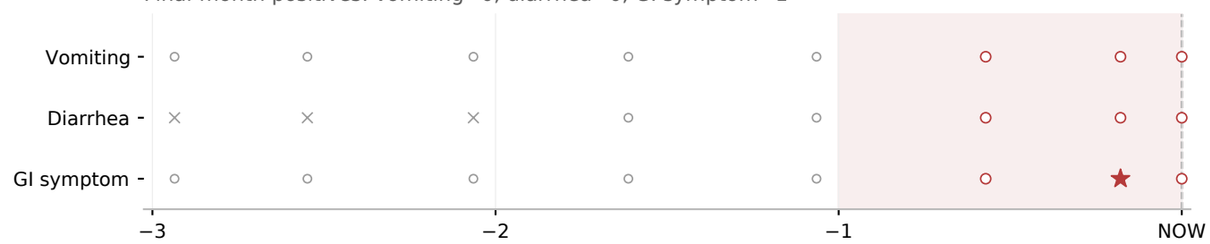

TB_00132 | P(GI=1) = 5.1% | observed GI = 1

Final-month positives: vomiting=0, diarrhea=0, GI symptom=0

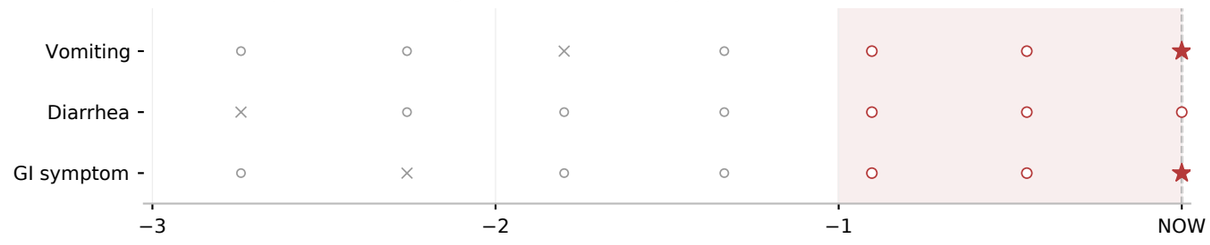

TB_00003 | P(GI=1) = 9.7% | observed GI = 0

Final-month positives: vomiting=0, diarrhea=0, GI symptom=1

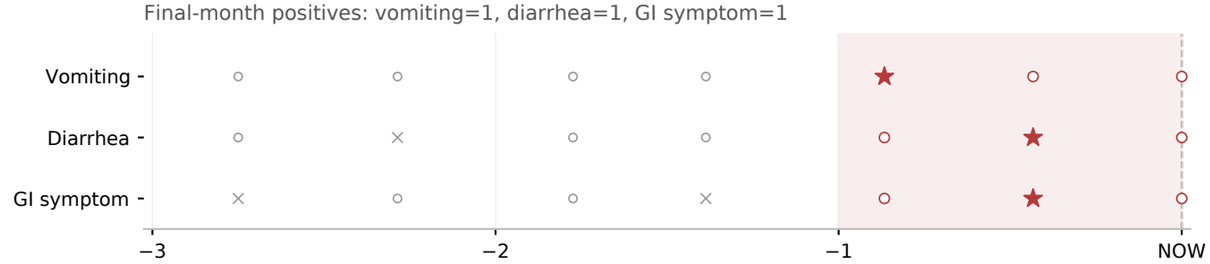

TB_00068 | P(GI=1) = 24.3% | observed GI = 1

Final-month positives: vomiting=1, diarrhea=0, GI symptom=1

TB_00000 | P(GI=1) = 44.6% | observed GI = 0

Final-month positives: vomiting=1, diarrhea=1, GI symptom=1

Calendar months relative to NOW · final 3 months shown

FA window: value 1 | GI window: value 1 | Open circle: recorded value 0 | Gray: outside outcome's window

Probabilities describe synthetic risk; observed labels are sampled Bernoulli outcomes, not deterministic rule results.

Saved V3 clean-FA patients, purposefully selected for illustration—not a prevalence sample. No histories or labels were generated.
